

TABLE EDITOR FOR WEB PAGES

ABSTRACT OF THE INVENTION

5

A method and apparatus for allowing a user to edit a table in a Web page is provided. The method comprises displaying the table and several display elements on a display device. An indication is received, which user wants to add one of the display elements or modify a layout of the table to the table. A cell structure is added or changed for the display element to several table structures corresponded to the table on the display device. In response to the indication is generated to change a display of the table and several HTML (HyperText Markup Language) or XML codes that substantially reflect the table in accordance with the table structures on the display device.
